Zusammenfassung von DE3713248

Cylinder for hydraulic systems, in particular for motor vehicles, consisting of a plastic housing with an axial bore in which a piston is guided in an axially displaceable manner and is acted upon on one side by hydraulic fluid, the cylinder being provided with connections for at least one pressure line and a connection to a fluid chamber and for fastening. With the lightweight construction retained, the piston, while avoiding noise problems, was produced from plastic and encased by a thin-walled tube which is connected in an axially fixed manner to the piston.
